Diabetes Prediction using SVM

We have the pre-collected data from popular data scouce community, kaggle. Hear we are implementing suport vector machine to predict if a person is diabetic or not.

Steps Followed

- 1. Collect sonar data
- 2. Data Preprocessing (Standardization)
- 3. Train Test Split
- 4. Support Vector Machine Model
- 5. Predictions on old data (train and test)
- 6. Model Performance Results
- 7. Creating predictive system

```
import numpy as np
import pandas as pd
```

1. Collect/Load PIMA diabetes Data

```
In [2]:
#data collection and analysis
diabetes_df = pd.read_csv("C:/Users/Mohankumar MC/Desktop/ML Projects/Diabetes Prediction
```

2. Data Preprocessing

```
In [3]:
diabetes_df.head()
```

Out[3]:

	Pregnancies	Glucose	BloodPressure	SkinThickness	Insulin	ВМІ	DiabetesPedigreeFunc
0	6	148	72	35	0	33.6	C
1	1	85	66	29	0	26.6	C
2	8	183	64	0	0	23.3	C
3	1	89	66	23	94	28.1	C
4	0	137	40	35	168	43.1	2
